

Exam scores are processed on Mondays and Thursdays. You can expect to receive an email from the Cisco team within three days detailing your Application status and directions for next steps.

Score: 100%

84/84 points

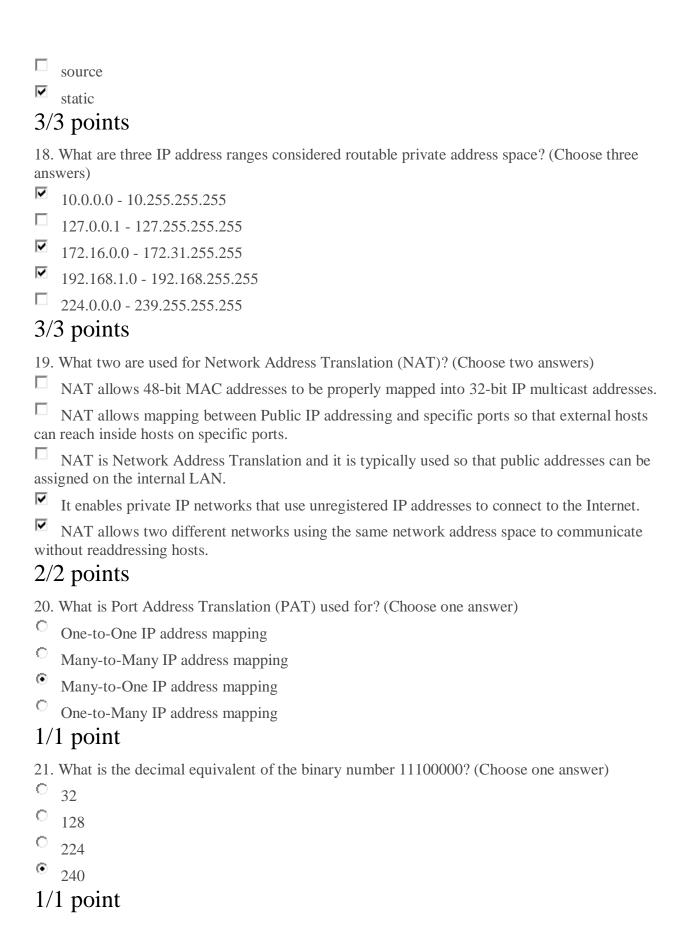

Page 2/
1. Which two Linux commands can be used to display currently active processes? (Choose two answers)
netstat
tcpdump
▼ top
ifconfig
proc
2/2 points
2. What command can you use to determine the MAC address of a Linux-based machine? (Choose one answer)
© ipconfig
• ifconfig
C getmac
C intmac
1/1 point

3. What three are valid permissions under Linux? (Choose three answers)

read
□ shared
execute execute
no permissions
□ full control
3/3 points
4. What two Linux commands can be used for pattern matching and filtering of output? (Choose two answers)
□ echo
E
TING
gich
more
2/2 points
5. In what two directory locations are non-OS software installed on Linux machines? (Choose two answers)
/bin
/home
/lib
✓ /opt
/usr/local
2/2 points
6. What is the purpose of the 'sudo' command in Linux? (Choose one answer)
Provides a stateful 'undue' of the previous command.
Enters the administrator or superuser command mode.
Configures the pseudowire interface on Linux machines.
Allows a logged in user to run Linux commands as the administrator.
1/1 point
7. Where are user-specific passwords stored in a Linux OS? (Choose one answer)
^etc/password
/etc/shadow
o /usr/local

C /usr/password 1/1 point
8. What command is used to verify disk capacity of Linux hosts? (Choose one answer) chkdsk df du hwinfo 1/1 point
 9. What does the linux command 'tar -cvf' do? (Choose one answer) Activates task management and recovery tools. Terminates active running processes specificed by the user. Creates an archive from a set of files without verification. Mounts terminal access ports for use by the Linux kernel. 1/1 point
10. Which command is used to view the contents of a directory within Linux? (Choose one answer) cat df dir ls 1/1 point
 11. What function does Snort perform on Linux machines? (Choose one answer) File scanning for malware and virus infections. Simple Network Object management. Real-time traffic analysis and packet logging in IP networks. Simple messaging system for Linux system alerts. 1/1 point
 12. What Linux command is used to verify the host network configuration? (Choose one answer) biff cat /etc/hosts ifconfig netconf

1/2	1/1 point		
card	What three are characteristics of MAC addresses? (Choose three answers) MAC addresses are used to forward packets in LAN switches. MAC addresses are used by routers to build routing tables and make routing decisions. The first three byes are the OUI which identifies the manufacturer of the network interface d. Dynamic MAC addresses are assigned by DHCP. MAC addresses are unique across the global internet. 3 points		
	100 192 254 2 points		
0000	What is the purpose of a subnet mask in IPv4 addressing? (Choose one answer) To help hosts determine the gateway address to send non-local packets to. It masks the network in the IPv4 address allowing hosts to know their assigned host address. It masks the IPv4 address to determine the all 1's or broadcast address. It helps determine which portion of an IPv4 address represents the network. 1 point		
□ ▼ □ □ ■ 3/3	What three are information stored in routing tables? (Choose three answers) A mapping of layer 2 MAC addresses to layer 3 IP addresses. A metric or cost associated with a particular network destination. A list of outgoing interfaces to reach a particular network destination. A list of MAC addresses used to forward packets onto their next-hop destinations. A list of destination networks. 3 points What three are types of routes typically found on Cisco routers? (Choose three answers) connected dynamic hybrid		

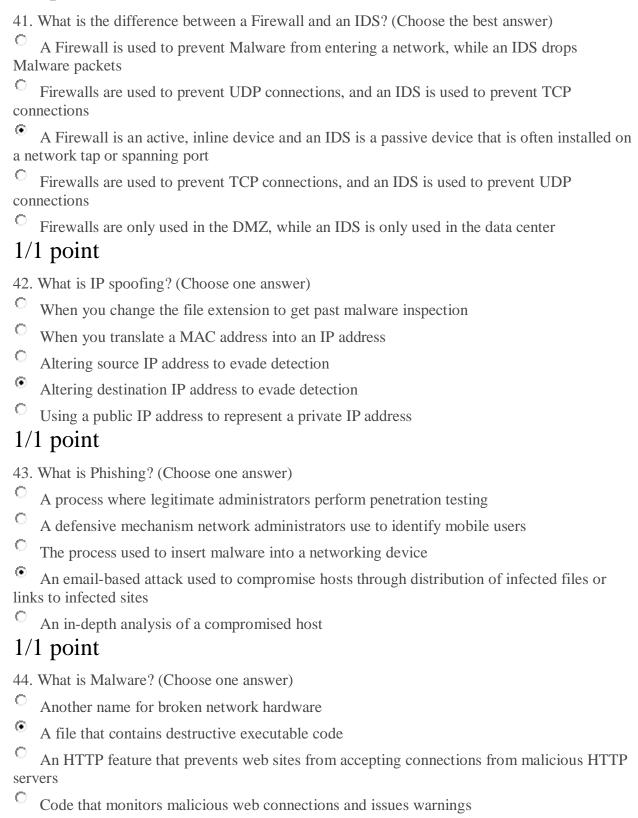

22. What is the function of Virtual Local Area Networks (VLANs)? (Choose one answer) VLANs allow hosts with private IP address to communicate with devices on the Internet. VLANs are used to segment a switch into multiple logical switches and broadcast domains VLANs are used to create loop-free layer 2 networks. VLANs are used to forward layer two packets between hosts connected to layer 2 switches 1/1 point Virtual Local Area Networks (VLANs) are used to segment a
switch into multiple logical switches and broadcast domains.
 23. Which protocol is used to eliminate layer 2 loops? (Choose one answer) Address Resolution Protocol (ARP) Dynamic Host Configuration Protocol (DHCP) Spanning Tree Protocol (STP) Transmission Control Protocol (TCP) 802.1Q Protocol
1/1 point
24. What is a Default Gateway? (Choose one answer) The default IP address of a local host The IP address of last resort Another name for DHCP server The service that resolves names to IP addresses. 1/1 point
25. Which two statements regarding Public and Private IP addressing are correct? (Choose two answers)
224.45.1.1 is a private IP address Private IP addresses can start with 192.168.x.x Private IP addresses are registered Public IP addresses are registered Private IP addresses are not routable 2/2 points
26. What is the binary equivalent of the decimal number 183? (Choose one answer) 10110011 10110111

0	11010111
0	11001001
1/	1 point
27.	Which three are fields contained in an IPv4 header (RFC 791)? (Choose three answers)
	Destination MAC Address
V	Time To Live
V	Source IP Address
	Source Port
	Sequence Number
V	Header Checksum
3/.	3 points
28.	What are two features of IPSec? (Choose two answers)
V	Establishes VPN connectivity
V	Authenticates each packet in a data flow
	Allows encryption the IP header
	Establishes Secure Shell (SSH) connections
	Facilitates data link-layer security such as Transport Layer Security (TLS)
2/2	2 points
	At which OSI layer does TCP operate? (Choose one answer)
0	data link
0	network
0	session
•	transport
1/	1 point
30.	What are two uses of DNS? (Choose two answers)
	Enables use of Private IP addresses when accessing the Internet
	Used to resolve a Mac address from an IP address
V	Used to resolve domain names from IP addresses
V	Used to resolve IP addresses from domain names
	Used to dynamically assign IP addresses to hosts
2/2	2 points

31. What type of incorrect security alert can result from non-malicious activity being seen as malicious? (Choose one answer)
C True positive
C False positives
False Negative
C True negative
1/1 point
32. Which of the following is an example of a false negative? (Choose one answer)
Anti-virus detects malware on a nonthreatening application
The IDS does not identify a buffer overflow
A user is locked out after mistyping the password too many times
The alarm system is triggered by a book falling off the desk
1/1 point
33. Cache Poisoning is most commonly associated with which protocols? (Choose two answers)
\square NTP
✓ ARP
DNS
□ NCP
2/2 points
34. Which of the following design components are used to isolate network devices such as web servers? (Choose one answer)
A Layer 2 Switch
° _{VPN}
° NAT
• DMZ
1/1 point
35. Which of the following would be used as a secure substitute for Telnet? (Choose one answer)
• SSH
^C SFTP
^C SSL
° HTTPS
1/1 point

36.	Which of the following could result from a successful attack? (Choose one answer)
•	DoS
0	DNS
0	POP3
0	WINS
1/	1 point
are	Which Internet Protocol encrypts and decrypts user page requests, as well as the pages that returned by a web server using SSL/TLS? (Choose one answer)
	NNTP
0	FTP
_	HTTP
•	HTTPS
1/	1 point
	Which best describes Least Privilege? (Choose one answer)
0	The minimum number of IP addresses required to construct a DNS server
0	Entry level certificate for security professionals
•	A policy limiting access to resources required for a task
0	An ACL limiting access to only classified data
1/	1 point
39.	Which of the following is the best example of Defense-In-Depth? (Choose one answer)
0	All enterprise host devices use private IP addresses
0	All enterprise applications leverage TCP and UDP for client sessions
0	An enterprise Firewall and use of private IP addresses
•	An enterprise Firewall and host anti-virus applications
0	An enterprise IDS and use of private IP addresses
1/	1 point
40.	What is a PIN? (Choose one answer)
•	A Personal Identification Number
0	Performance Infrastructure broken
0	Automated software tools that 'Probe Interior Network' vulnerabilities
0	Private addressing Integration
\circ	A level 16 access privilege

1/1 point

	TCP connections that stop responding when a service stops running 1 point
○○○○1/	Which service is used to Authenticate users? (Choose one answer) NTP DHCP TACACS ARP STP 1 point
\odot	Which of the following is an example of a "Brute Force" attack? (Choose one answer) The simplest form of attack against a site using repetitive login attempts and rotating rnames and passwords
O O COI	A finely crafted attack that results in physical damage to a host Any attack that results in physical damage to a server A sweep of all open connections to a host followed by a spoofed disconnect for each anection
	1 point
○ ⊙	What is used to uniquely identify known Malware? (Choose one answer) The combination of file name and extension are the key identification elements for Malware A hash-based algorithm run against a suspected malware file with the results compared to a abase of known malware
0	The source IP address that sent the suspected malware file Detonation of the suspected malware file in a sandbox is the only way to uniquely identify lware There is no way to uniquely identify suspected malware files 1 point
	What differentiates a Next Generation Firewall (NGFW) from a standard Firewall W)? (Choose one answer) A standard firewall does not maintain a TCP state table A standard firewall looks at OSI layers 2-5; a NGFW looks at layers 3-4 A NGFW supports multiple domains; a standard FW only supports one domain Only Cisco markets NGFWs; any other brand is a FW

A standard FW looks at OSI layers 3-4; a NGFW looks at more information including the application layer protocol commands. 1/1 point
49. True or False. It is considered a best security practice to place a login banner on Cisco switches and routers using the "banner" command. TRUE
• FALSE
1/1 point
50. Which of the following Windows commands can be used to see processes that are running and the TCP port that is being used as well? (Choose one answer) psinfo net session ipconfig netstat 1/1 point
51. What protocol can you use on a Windows machine to allow for secure remote
access? (Choose one answer) Bash CMD
© RSH
• SSH
Telnet
1/1 point
52. As a security administrator for your Windows networked environment, you have been notified that your systems might have been breached by malware that has modified entries in the HOSTS file. Which service can be affected by this breach? (Choose one answer) ARP DNS
C LMHOSTS
NetBIOS
1/1 point
53. Which protocol commonly provides the underlying secure authentication in a Windows Active Directory environment? (Choose one answer) Kerberos

0	LDAP
	RADIUS
	TACACS+
1/	1 point
cor	You are tasked with changing the password policy across all Windows PCs in the mpany? Which would be the BEST way for performing this task with the least amount of erhead? (Choose one answer)
0	Certificate revocation
0	Key escrow
\odot	Group policy
0	Security group
1/	1 point
too	You receive a call that a Windows-based computer is infected with malware and is running slowly to boot and run a malware scanner. Which of the following is the BEST way to run malware scanner? (Choose one answer)
0	Kill all system processes
0	Enable the firewall
•	Boot from CD/USB
0	Disable the network connection
1/	1 point
	What is the minimal security access level normally required to add or modify application grams on a Windows PC? (Choose one answer)
\odot	Administrator
0	Guest
0	Operator
0	User
1/	1 point
57.	What utility should be used to access the registry on a Windows 7 PC? (Choose one answer)
0	edit
\circ	hexedit
0	ifconfig
\circ	msconfig
\odot	regedit

1/1 point

	What command is used to open a command line interpreter within Windows? (Choose one
ms ⊚	wer)
0	cmd
0	putty
0	shell
	term 1 point
	•
_	How do you switch between logged-in user accounts in Windows 7? (Choose one answer)
0	Choose Start -> All Programs -> Switch User
0	Reboot
0	Windows 7 does not support multiple users
⊙	ctl-alt-del, then choose 'Switch User'
1/	1 point
	How can you determine the last date and time a Windows application file was modified? oose three answers)
~	Run 'dir' from the command line
~	Right click on the file name in a directory, and choose properties
~	View file details within a directory
	Open the associated application and view the file from within the application
3/3	3 points
	Performance Monitor (PerfMon) is used for what in the Windows 7 OS? (Choose one wer)
0	To log inbound TCP connection performance
⊙	To monitor system and program performance
0	To manage user access and permissions which can negatively impact system performance
0	To set memory limits for hosted services
1/	1 point
	Done
